(3) Authorized Medical Allowance List (AMAL) 645 (FRSS Equipment) Tier Classification by Mission Essential Task (MET)
(4) AMAL 646 (FRSS Resupply) Tier Classification by MET
(5) Consolidated AMAL Highest Priority Summary by MET
(6) Tier Classification Legend and Definitions

1. Purpose. To establish standard operating procedures for the Forward Resuscitative Surgical System (FRSS) in the execution of Health Service Support (HSS) Mission Essential Tasks (METs) as defined in reference (a). This SOP describes the FRSS deployment Table of Organization (T/O), defines how each position operationalizes assigned METs, establishes the receiving I-PASS transition of care protocol for Shock Trauma Platoon (STP)-to-FRSS patient handoff per references (e) and (g), and provides a task-oriented tiering of all FRSS Authorized Medical Allowance List (AMAL) equipment and consumables against supported METs.

2. Cancellation. None.

3. Scope. This SOP applies to all personnel assigned or attached to the FRSS, 1st Medical Battalion. It covers the FRSS operating in its primary role as a surgical treatment facility per reference (b), executing event HSS-FRSS-4001 (Establish a surgical treatment facility) and its chained events: HSS-SVCS-3701 (Perform mass casualty), HSS-SVCS-3501 (Receive casualties), HSS-SVCS-3502 (Conduct temporary casualty holding), and HSS-SVCS-3401 (Conduct casualty evacuation). Per reference (a), HSS-FRSS-4001 directly supports METs 2 and 4. AMAL coverage includes AMAL 645 (FRSS Equipment) and AMAL 646 (FRSS Resupply).

4. Background

a. **Doctrinal Organization.** Per reference (a), the FRSS is one of the smallest units that provides surgical care to combat casualties. The FRSS is capable of providing a full spectrum of trauma care ranging from triage, Advanced Trauma Life Support (ATLS), and stabilization through salvage surgical procedures. Doctrinally, the team is comprised of eight personnel: two general surgeons, one anesthesiologist, one critical care nurse, one Independent Duty Corpsman (IDC), two operating room technicians, and one Field Medical Technician (FMT). The patient holding capability of the FRSS is no more than four hours per reference (a); patients requiring extended holding are transferred to the Holding section.

b. **Deployment Configuration.** The 1st Medical Battalion FRSS deployment T/O, detailed in enclosure (1), reflects the current manning optimized for Role 2 operations. Key differences from doctrinal organization include: the second General Surgeon billet is filled by a surgeon with orthopedic capability, enabling management of extremity and musculoskeletal combat injuries; and the IDC billet remains on the T/O as an aspirational fill. The FRSS operates one primary surgical table. The second surgeon assists the primary or manages pre-operative and post-operative patients. When casualty volume demands, the orthopedic-capable surgeon may operate a second table for extremity cases.

c. The FRSS provides Damage Control Surgery (DCS) as its primary clinical capability. DCS encompasses operative hemorrhage control, contamination control, temporary vascular shunting, fasciotomy, and abbreviated surgical stabilization. DCS is not definitive surgery; the goal is to render the patient survivable for evacuation to a higher echelon of care (Role 3 or Role 4). The FRSS receives patients from the STP following Damage Control Resuscitation (DCR) and I-PASS handoff per references (e) and (g). The Critical Care (CC) Nurse flexes between circulating nurse duties during active DCS and post-operative recovery management based on volume.

5. Mission Essential Task Execution. The following paragraphs describe how FRSS personnel operationalize each supported MET per reference (a). Equipment and consumables required for each MET are tiered in enclosures (3) and (4).

a. MET 2: Conduct Casualty Treatment (MCT 4.5.3). MET 2 is the primary mission of the FRSS. Upon establishment of the surgical treatment facility per HSS-FRSS-4001, the FRSS receives surgical candidates from the STP and performs DCS.

(1) The primary General Surgeon serves as the lead operating surgeon, executing DCS procedures. The primary surgeon determines the operative plan, directs the surgical team, and makes the determination to transition from DCS to temporary closure when the patient is stabilized.

(2) The second General Surgeon (orthopedic-capable) assists the primary surgeon during complex cases or manages pre-operative and post-operative patients. When casualty volume requires, the second surgeon operates independently on a second table for extremity fasciotomy, external fixation, or vascular shunt placement.

(3) The Anesthesiologist provides general anesthesia, airway management, and intraoperative hemodynamic monitoring and resuscitation. The Anesthesiologist manages intraoperative blood product administration per reference (c) and communicates ongoing Massive Transfusion Protocol (MTP) requirements to the STP Emergency Nurse via the Combat Operations Center (COC).

(4) The CC Nurse flexes between circulating nurse duties during active DCS (managing operating room flow, surgical supplies, instrument counts, and documentation) and post-operative recovery management when DCS cases are completed. During high-volume operations, the CC Nurse prioritizes circulating duties and post-operative patients are transferred to Holding.

(5) The two Surgical Technicians (Surg Techs) serve as the scrub team: one scrubs in as the primary surgical assistant, the other prepares instruments, manages the sterile field, and rotates with the first during extended or sequential cases. The Surg Techs are responsible for surgical instrument accountability and sterilization between cases.

(6) The FMT provides patient movement support, assists with positioning, manages non-sterile supply flow, and serves as a runner between the FRSS and the STP, COC, and Holding section.

(7) The IDC billet, if filled, augments the FRSS as a mid-level provider capable of managing pre-operative and post-operative patients, freeing the second surgeon to assist with complex cases or operate independently.

b. MET 4: Conduct Casualty Evacuation (MCT 4.5.5). The FRSS supports MET 4 by stabilizing patients for evacuation to a higher echelon of care and executing casualty turnover per HSS-SVCS-3401. Post-DCS patients require evacuation within four hours per reference (a) unless transferred to Holding.

(1) The operating surgeon determines evacuation priority and prepares the surgical summary for the evacuation request. The CC Nurse or FMT prepares the patient for transport, securing surgical drains, chest tubes, and vascular access.

(2) For patients requiring extended holding beyond four hours, the FRSS executes a transition of care handoff to the Holding section. The operating surgeon or CC Nurse delivers an I-PASS briefing to the receiving Holding provider.

(3) Storage and transport containers classified as Helpful for MET 4 in enclosures (3) and (4) enable displacement and retrograde of the FRSS when directed. The FRSS must maintain the capability for hasty retrograde per HSS-FRSS-4001 event component 5.

6. Transition of Care

a. STP-to-FRSS Receiving Handoff. The FRSS receives patients from the STP via the I-PASS handoff protocol established in reference (e) and detailed in enclosure (2). The receiving FRSS surgeon listens to the I-PASS briefing from the transferring STP Emergency Physician or Physician Assistant (PA), synthesizes the handoff, and verbally accepts or requests additional stabilization before physical patient transfer. Blood product status per reference (c) is a mandatory element of every handoff.

b. FRSS-to-Holding Handoff. Post-DCS patients requiring holding beyond four hours are transferred to the Holding section using the same I-PASS format. The operating surgeon delivers the briefing, emphasizing: surgical procedure performed, temporary closures or shunts in place, anticipated complications, re-operation triggers, and ongoing blood product or medication requirements per reference (c).

c. FRSS-to-Evacuation Handoff. Patients evacuated directly from the FRSS to a higher echelon receive an I-PASS briefing from the operating surgeon to the receiving evacuation team. Surgical documentation (operative note) accompanies the patient.

7. Documentation

a. The following documentation is required for each patient receiving DCS in the FRSS:

(1) Operative Note. The operating surgeon dictates or writes an operative note for each DCS procedure. At minimum, the note includes: date/time, pre-operative diagnosis, procedure performed, findings, estimated blood loss, blood products administered, implants or shunts placed, and post-operative plan.

(2) Anesthesia Record. The Anesthesiologist maintains an anesthesia record documenting: agents administered, airway management, hemodynamic parameters, blood products, and intraoperative events.

(3) DD 3019 Resuscitation Record. Updated with FRSS interventions and maintained with the patient through subsequent transfers.

(4) Instrument Count Documentation. The circulating CC Nurse and scrub Surg Tech document instrument, sponge, and needle counts per standard surgical safety protocols. In DCS, intentional abbreviated counts are documented with rationale.

b. Casualty reporting to the COC will be conducted per reference (d), including: surgical procedure performed, estimated blood loss, blood products consumed, patient disposition, and anticipated evacuation timeline.

8. Training

a. Required Certification. All FRSS personnel must maintain current Basic Life Support (BLS) certification. BLS is the minimum standard for assignment to the FRSS.

b. Recommended Certifications and Training Considerations:

(1) Advanced Trauma Life Support (ATLS). Recommended for General Surgeons. ATLS provides the structured trauma assessment framework referenced in HSS-FRSS-4001.

(2) Advanced Cardiac Life Support (ACLS). Recommended for General Surgeons, Anesthesiologist, and CC Nurse. Enhances management of intraoperative cardiac events.

(3) Advanced Burn Life Support (ABLS). Recommended for General Surgeons. Burn casualties requiring escharotomy or fasciotomy are anticipated during Large Scale Combat Operations (LSCO).

(4) Tactical Combat Casualty Care (TCCC), Tier 3 or Tier 4. Recommended for all FRSS personnel. Provides continuity with point-of-injury and STP care frameworks. Surgeons and Anesthesiologist should hold Tier 4; Surg Techs and FMT should hold Tier 3.

(5) Certified Registered Nurse Anesthetist (CRNA) currency. The CC Nurse, if CRNA-qualified, should maintain currency to augment or relieve the Anesthesiologist during extended operations.

c. Collective Training. The FRSS will train to HSS-FRSS-4001 and its chained events at a minimum sustainment interval of six months per reference (a). Training will incorporate simulated DCS scenarios with instrument sets from AMAL 645, MTP execution per reference (c), and I-PASS handoff rehearsals per references (e) and (g).

9. AMAL Equipment and Consumable Tiering

a. Enclosures (3) and (4) classify every line item in AMAL 645 (FRSS Equipment, 749 items) and AMAL 646 (FRSS Resupply, 256 items) as Essential, Helpful, or Expendable for each MET supported by HSS-FRSS-4001: METs 2 and 4. Enclosure (5) provides a consolidated view with the highest priority across both METs. Tier definitions are provided in enclosure (6).

b. Items Essential for MET 2 represent the minimum viable DCS capability: surgical instruments, anesthesia equipment, sterile consumables, and blood product support. These items receive highest resupply and maintenance priority.

c. Items classified as Helpful for MET 4 but Expendable for MET 2 (primarily storage and transport containers) support displacement and retrograde operations. These items become critical during displacement and should not be left behind despite low clinical priority.

10. Administration and Logistics. This SOP will be reviewed annually or upon significant changes to references (a) through (e). The FRSS Officer in Charge (OIC) will maintain a current AMAL inventory cross-referenced against enclosures (3) and (4) to enable rapid assessment of MET execution capability.

11. Command and Signal. The FRSS OIC (senior General Surgeon) retains authority for all clinical and task organization decisions within the FRSS. In the absence of the OIC, authority passes to the second General Surgeon, then to the Anesthesiologist. The senior Surg Tech manages administrative and logistical functions.

ENCLOSURE (1)**FRSS Table of Organization - Deployment Configuration**

The following table reflects the 1st Medical Battalion FRSS deployment T/O. Doctrinal FRSS organization per reference (a) includes eight personnel. The deployment configuration retains the doctrinal structure with the second General Surgeon billet filled by a surgeon with orthopedic capability. The IDC billet is aspirational and will be filled as manning allows.

Position	Qty	Primary Role in MET Execution
General Surgeon	1	Lead operating surgeon; DCS lead; determines operative plan and evacuation priority
General Surgeon / Orthopedic	1	Assists primary surgeon or operates 2nd table for extremity cases; manages pre/post-op
Anesthesiologist	1	General anesthesia; airway management; intraoperative resuscitation and monitoring; MTP coordination
Critical Care Nurse	1	Flexes between circulating nurse (OR flow, supplies, counts) and post-op recovery management
<i>Independent Duty Corpsman (Aspirational)</i>	<i>(1)</i>	<i>Aspirational fill; would manage pre/post-op patients, freeing 2nd surgeon</i>
Surgical Technician	2	Scrub team: primary surgical assist, sterile field, instrument accountability, sterilization
Field Medical Technician	1	Patient movement, positioning, non-sterile supply flow, runner to STP/COC/Holding

Surgical Table Organization:

Primary Table: General Surgeon (lead) + Surg Tech (scrub) + Anesthesiologist + CC Nurse (circulating)

Second Table (volume-dependent): General Surgeon/Orthopedic (lead) + Surg Tech (scrub) + Anesthesiologist (shared)

The Anesthesiologist manages both tables when two are running simultaneously. The CC Nurse transitions to post-operative management when not circulating. The FMT provides non-sterile support and patient movement.

ENCLOSURE (2)**I-PASS Transition of Care Protocol for STP-to-FRSS Receiving Handoff**

The FRSS receives patients from the STP via the I-PASS structured handoff framework per references (e) and (g). The STP Emergency Physician or Physician Assistant (PA) delivers the briefing; the receiving FRSS surgeon synthesizes and accepts. Blood product status per reference (c) is mandatory. Physical patient transfer occurs only after verbal acceptance.

Element	FRSS Receiving Application
I - Illness Severity	Receiving surgeon assesses: Is this patient stable enough for anesthesia induction? Does hemodynamic status require ongoing MTP during DCS?
P - Patient Summary	Receiving surgeon confirms: mechanism, injuries identified, STP interventions (DCR, blood products, airways, chest tubes), POCUS findings, allergies.
A - Action List	Receiving surgeon confirms surgical indication, planned procedure, outstanding blood product needs, antibiotic status (cefazolin/ceftriaxone/doxycycline).
S - Situation Awareness	Receiving surgeon notes: re-bleeding risk, coagulopathy concerns, concurrent MASCAL status, other patients pending FRSS, 2nd table availability.
S - Synthesis by Receiver	Receiving surgeon reads back: planned procedure, blood status, patient identity. Verbally ACCEPTS patient or REQUESTS additional STP stabilization before transfer.

FRSS Receiving Checklist (completed by receiving surgeon):

1. Confirm patient identity and mechanism of injury.
2. Confirm surgical indication and planned procedure.
3. Confirm total blood products administered and current MTP status.
4. Confirm Walking Blood Bank (WBB) status and anticipated surgical blood requirements.
5. Confirm Tranexamic Acid (TXA) administration status.
6. Confirm antibiotic administration (cefazolin, ceftriaxone, or doxycycline per reference (c)).
7. Verbally accept patient or request additional stabilization.

ENCLOSURE (3)**AMAL 645 (FRSS Equipment) Tier Classification by MET**

749 line items classified against METs 2 and 4 per reference (a). See enclosure (6) for tier definitions.

ENCLOSURE (6)
Tier Classification Legend and Definitions

Tier	Definition
Essential	Equipment/supply without which the MET cannot be accomplished. Loss renders the capability non-executable. Highest priority for resupply, maintenance, and protection.
Helpful	Equipment/supply that significantly enhances MET execution. MET can be accomplished in degraded mode without this item. Secondary resupply priority.
Expendable	Equipment/supply not required for this specific MET. May support other METs or general operations. Lowest resupply priority for this MET.

Application Notes:

1. Items Essential for MET 2 represent the minimum viable DCS capability. Surgical instruments, anesthesia equipment, and sterilization supplies are the highest priority.
2. Blood product support equipment (warmers, infusors, transfusion sets) classified as Essential for MET 2 must be maintained in operational condition per reference (c).
3. Items Helpful for MET 4 primarily support patient evacuation preparation and FRSS displacement. Storage containers become critical during retrograde.
4. Anesthesia equipment and inhalational agents have no substitute in the FRSS. Loss of the anesthesia machine eliminates the DCS capability entirely.
