(d) 1st Medical Battalion Mass Casualty (MASCAL) Standard Operating Procedures
(e) 1st Medical Battalion Shock Trauma Platoon (STP) Standard Operating Procedures
(f) 1st Medical Battalion Forward Resuscitative Surgical System (FRSS) Standard Operating Procedures
(g) MCWP 4-11.1, Health Service Support Operations

- Encl: (1) Holding Section Table of Organization - Deployment Configuration
(2) Authorized Medical Allowance List (AMAL) 633 (Acute Care Ward Equipment) Tier Classification by Mission Essential Task (MET)
(3) AMAL 634 (Acute Care Ward Consumables) Tier Classification by MET
(4) Consolidated AMAL Highest Priority Summary by MET
(5) Tier Classification Legend and Definitions

1. Purpose. To establish standard operating procedures for the Holding section in the execution of Health Service Support (HSS) Mission Essential Tasks (METs) as defined in reference (a).

This SOP describes the Holding section deployment Table of Organization (T/O), defines how each position operationalizes assigned METs, and provides a task-oriented tiering of all Holding Authorized Medical Allowance List (AMAL) equipment and consumables against supported METs.

2. Cancellation. None.

3. Scope. This SOP applies to all personnel assigned or attached to the Holding section, 1st Medical Battalion. It covers the Holding section operating a 20-bed acute care ward per reference (b), executing event HSS-SVCS-3502 (Conduct temporary casualty holding) as the primary executor. Per reference (a), HSS-SVCS-3502 supports METs 2, 3, 4, and 7 (MET 6, Dental Services, is excluded). AMAL coverage includes AMAL 633 (Acute Care Ward Equipment) and AMAL 634 (Acute Care Ward Consumables).

4. Background

a. The Holding section provides temporary casualty holding for patients awaiting evacuation to a higher echelon of care or return to duty. Per reference (b), the surgical company provides medical treatment and temporary hospitalization of casualties, normally for up to 72 hours. The Holding section receives patients from both the Shock Trauma Platoon (STP) (pre-surgical or non-surgical casualties) and the Forward Resuscitative Surgical System (FRSS) (post-Damage Control Surgery (DCS) casualties). This dual intake pathway requires the Holding section to manage a heterogeneous patient population ranging from critically ill post-operative patients to stable Disease and Non-Battle Injury (DNBI) cases.

b. The deployment configuration operates 20 beds organized into two acuity tiers. The Critical Care Nurse (Navy Enlisted Classification (NEC) 1960) manages the high-acuity tier for post-DCS patients requiring intensive care unit (ICU)-level monitoring: ventilator management, vasoactive medication titration, and invasive hemodynamic monitoring. The Medical-Surgical Nurse (NEC 1910) manages the lower-acuity tier for stable casualties, DNBI, and pre-evacuation patients requiring floor-level nursing care: wound assessments, medication administration, and evacuation preparation. The Family Medicine Physician provides medical oversight across both tiers.

c. The Holding Officer in Charge (OIC) is assigned separately and is not on the Holding T/O. The Family Medicine Physician serves as the primary medical provider and clinical authority within the Holding section but does not serve as the OIC.

5. Mission Essential Task Execution. The following paragraphs describe how Holding personnel operationalize each supported MET per reference (a).

a. MET 3: Conduct Temporary Casualty Holding (MCT 4.5.4). MET 3 is the primary mission of the Holding section. It requires assessment, monitoring, and sustainment of casualties until evacuation or return to duty.

(1) The Family Medicine Physician conducts serial reassessments, manages medications (including pain management, antibiotics per reference (c), and anticoagulation), makes disposition decisions (evacuate, return to duty, or request FRSS reassessment for surgical complications), and provides clinical documentation.

(2) The Critical Care Nurse (NEC 1960) manages the high-acuity beds, providing ICU-level nursing care for post-DCS patients transferred from the FRSS per reference (f). Responsibilities include ventilator management, vasoactive medication titration, invasive line monitoring, blood product administration per reference (c), and early recognition of surgical complications requiring FRSS re-operation.

(3) The Medical-Surgical Nurse (NEC 1910) manages the lower-acuity beds, providing floor-level nursing care for stable casualties and DNBI patients. Responsibilities include wound care, medication administration, intake and output monitoring, and preparation of casualties for evacuation.

(4) The eight Field Medical Technicians (FMTs) are organized into teams assigned to the high-acuity and lower-acuity tiers under the supervision of the respective nurse. FMTs perform bedside vital signs, assist with patient care, maintain casualty accountability, manage supplies, and serve as patient movement teams within the Holding section.

b. MET 2: Conduct Casualty Treatment (MCT 4.5.3). The Holding section supports MET 2 by receiving casualties from the STP for pre-surgical holding and from the FRSS for post-DCS care. The STP and FRSS are the primary executors of MET 2. Holding personnel provide ongoing resuscitative care as needed, including blood product administration per reference (c), airway monitoring, and wound reassessment.

c. MET 4: Conduct Casualty Evacuation (MCT 4.5.5). The Holding section supports MET 4 by preparing casualties for evacuation. The Family Medicine Physician or nurse prepares evacuation documentation and determines evacuation precedence per reference (g). FMTs prepare patients for transport, secure lines and tubes, and conduct casualty turnover.

d. MET 7: Conduct Medical Regulating Services (MCT 4.5.8). The Holding section supports MET 7 by maintaining bed status reporting to the Combat Operations Center (COC), enabling the Medical Regulator to manage patient flow and coordinate evacuation assets.

Documentation items classified as Helpful for MET 7 in enclosures (2) and (3) support this function.

6. Documentation

a. The following documentation is required for each patient held:

(1) Prolonged Field Care Casualty Card. Maintained for all patients in Holding. Updated with serial assessments, vital signs, medications administered, and disposition changes.

(2) DD 3019 Resuscitation Record. Continued from the STP or FRSS for patients who received resuscitative interventions. Updated with Holding interventions.

(3) Blood Product Administration Log. Maintained per reference (c) for all blood products administered in Holding.

(4) Bed Status Report. The senior nurse on each tier maintains a current bed status report (beds occupied, beds available, patients awaiting evacuation, patients for return to duty) and reports to the COC per the battle rhythm.

7. Training

a. Required Certification. All Holding personnel must maintain current Basic Life Support (BLS) certification.

b. Recommended Certifications and Training Considerations:

(1) Advanced Cardiac Life Support (ACLS). Recommended for the Family Medicine Physician and Critical Care Nurse (NEC 1960).

(2) Advanced Trauma Life Support (ATLS). Recommended for the Family Medicine Physician.

(3) Tactical Combat Casualty Care (TCCC), Tier 3 or Tier 4. Recommended for all Holding personnel. Family Medicine Physician should hold Tier 4; nurses and FMTs should hold Tier 3 at minimum.

(4) Trauma Nursing Core Course (TNCC). Recommended for the Critical Care Nurse (NEC 1960) and Medical-Surgical Nurse (NEC 1910).

(5) Critical Care Air Transport Team (CCATT) familiarization. Recommended for the Critical Care Nurse (NEC 1960) to facilitate patient preparation for aeromedical evacuation.

c. Collective Training. The Holding section will train to HSS-SVCS-3502 and supporting events at a minimum sustainment interval of six months per reference (a).

8. AMAL Equipment and Consumable Tiering

a. Enclosures (2) and (3) classify every line item in AMAL 633 (140 items) and AMAL 634 (187 items) as Essential, Helpful, or Expendable for METs 2, 3, 4, and 7. Enclosure (4) provides a consolidated view. Tier definitions are in enclosure (5).

b. Items Essential for MET 3 represent the minimum viable holding capability: patient monitoring, ward equipment, medications (particularly analgesics and antimicrobials), and documentation supplies. These receive highest resupply priority.

9. Administration and Logistics. This SOP will be reviewed annually or upon significant changes to references (a) through (f).

10. Command and Signal. The Holding OIC (assigned separately) retains administrative authority. The Family Medicine Physician retains clinical authority for all patient care decisions. In the absence of the Family Medicine Physician, the Critical Care Nurse (NEC 1960) assumes clinical authority for the high-acuity tier and the Medical-Surgical Nurse (NEC 1910) for the lower-acuity tier.

ENCLOSURE (1)**Holding Section Table of Organization - Deployment Configuration**

The following table reflects the 1st Medical Battalion Holding section deployment T/O. The Holding section operates 20 beds organized into two acuity tiers: a high-acuity tier under the Critical Care Nurse (NEC 1960) for post-DCS and critically ill patients, and a lower-acuity tier under the Medical-Surgical Nurse (NEC 1910) for stable casualties and DNBI. The OIC is assigned separately and is not on this T/O.

Position	Qty	Primary Role in MET Execution
Family Medicine Physician	1	Primary medical provider; reassessment, medication management, disposition decisions, clinical documentation
Critical Care Nurse (NEC 1960)	1	Manages post-DCS critical patients (ICU-level care); ventilator management, vasoactive medications, invasive monitoring
Medical-Surgical Nurse (NEC 1910)	1	Manages stable/less acute patients (floor-level care); wound care, medication administration, pre-evacuation preparation
Field Medical Technician	8	Bedside patient care, vital signs, documentation, patient movement, supply management; organized into teams

ENCLOSURE (2)**AMAL 633 (Acute Care Ward Equipment) Tier Classification by MET**

140 line items. See enclosure (5) for definitions.

ENCLOSURE (5)
Tier Classification Legend and Definitions

Tier	Definition
Essential	Equipment/supply without which the MET cannot be accomplished. Loss renders the capability non-executable. Highest priority for resupply, maintenance, and protection.
Helpful	Equipment/supply that significantly enhances MET execution. MET can be accomplished in degraded mode without this item. Secondary resupply priority.
Expendable	Equipment/supply not required for this specific MET. May support other METs or general operations. Lowest resupply priority for this MET.

Application Notes:

1. Items Essential for MET 3 represent the minimum viable holding capability. Patient monitoring, ward support equipment, analgesics, and antimicrobials are highest priority.
2. Documentation is classified as Essential for MET 3 because casualty accountability and serial reassessment are core holding functions.
3. Blood product support equipment is Essential for MET 3 because post-DCS patients may require ongoing transfusion in the holding environment per reference (c).
