(4) AMAL 632 (Shock Surgical/Triage Consumables) Tier Classification by MET

(5) Consolidated AMAL Highest Priority Summary by MET

(6) Tier Classification Legend and Definitions

**1. Purpose.** To establish standard operating procedures for the Shock Trauma Platoon (STP) in the execution of Health Service Support (HSS) Mission Essential Tasks (METs) as defined in reference (a). This SOP describes the STP deployment Table of Organization (T/O), defines how each position operationalizes assigned METs, establishes the I-PASS transition of care protocol for STP-to-FRSS patient handoff per reference (g), and provides a task-oriented tiering

of all STP Authorized Medical Allowance List (AMAL) equipment and consumables against supported METs.

**2. Cancellation.** None.

**3. Scope.** This SOP applies to all personnel assigned or attached to the STP, 1st Medical Battalion. It covers the STP operating in its primary role as a resuscitative facility per reference (b), executing event HSS-STP-5001 (Establish a resuscitative facility) and its chained events: HSS-SVCS-3701 (Perform mass casualty), HSS-SVCS-3501 (Receive casualties), HSS-SVCS-3502 (Conduct temporary casualty holding), and HSS-SVCS-3401 (Conduct casualty evacuation). Per reference (a), HSS-STP-5001 directly supports METs 2, 3, 4, 5, and 7. AMAL coverage includes AMAL 631 (Shock Surgical/Triage Equipment) and AMAL 632 (Shock Surgical/Triage Consumables). The En Route Care System (AMAL 647) is addressed in a separate SOP.

#### **4. Background**

a. **Doctrinal Organization.** Per reference (b), the STP is the most mobile medical support platoon of the medical battalion. Doctrinally, the STP consists of a stabilization section providing a 10 flow-through litter facility and two collecting and evacuation sections, each equipped with two M997 tactical ambulances. The stabilization section provides the nucleus for emergency treatment, triage, and evacuation stations. The STP may serve as a beach evacuation station, reinforce a battalion aid station (BAS), operate as an intermediate casualty collecting and clearing point, or serve as the forward element of a surgical company.

b. **Deployment Configuration.** The 1st Medical Battalion STP deployment T/O, detailed in enclosure (1), reflects the current manning and organizational structure optimized for Role 2 operations. Key differences from the doctrinal organization in reference (b) include: consolidation into a single section operating 4 resuscitation beds with 3-person Field Medical Technician (FMT) bed teams; separation of the ambulance section as an independent functional area; and addition of a Physician Assistant for flexible triage and DCR augmentation. The IDC billet remains on the T/O as an aspirational fill.

c. The STP provides damage control resuscitation (DCR) as its primary clinical capability. DCR encompasses hemorrhage control, blood product resuscitation per reference (c), airway management, and stabilization for surgical intervention or evacuation. During mass casualty (MASCAL) operations per reference (d), the STP serves as the primary triage and emergency treatment facility, executing the MASCAL plan and coordinating with the Combat Operations Center (COC) for patient tracking and evacuation prioritization.

**5. Mission Essential Task Execution.** The following paragraphs describe how STP personnel operationalize each supported MET per reference (a). Equipment and consumables required for each MET are tiered in enclosures (3) and (4).

**a. MET 2: Conduct Casualty Treatment (MCT 4.5.3).** MET 2 is the primary mission of the STP. Upon establishment of the resuscitative facility per HSS-STP-5001, the STP receives casualties (HSS-SVCS-3501), performs triage, and executes DCR across four open resuscitation beds.

(1) The two Emergency Physicians serve as DCR leads, providing physician oversight across the four beds. Each physician assumes primary management of two beds during routine operations, adjusting dynamically based on patient acuity. The Emergency Physicians execute triage decisions, direct resuscitative interventions, and determine surgical candidacy for FRSS transfer.

(2) The Emergency Nurse provides DCR nursing oversight across all four beds, with particular responsibility for blood product administration and massive transfusion protocol (MTP) execution per reference (c). The Emergency Nurse coordinates with the HQ Blood Bank Lead for Walking Blood Bank (WBB) activation when conventional blood supply is exhausted.

(3) The Physician Assistant flexes between triage and DCR based on casualty volume. During low-volume periods, the PA serves as the initial triage officer at the point of entry. As volume increases, the PA transitions to a third DCR provider, enabling the Emergency Physicians to focus on the most critical patients. The PA performs procedures including chest tube insertion, intraosseous access, and cricothyroidotomy as directed.

(4) The twelve Field Medical Technicians (FMTs) are organized into four bed teams of three. Each bed team provides continuous bedside care under physician direction: one FMT manages the airway and monitors, one manages vascular access and blood product infusion, and one manages documentation and runner duties. Roles rotate within the bed team based on patient flow and fatigue management.

(5) The IDC billet, if filled, augments the DCR provider pool as a mid-level practitioner, increasing the STP from three to four DCR-capable providers and reducing the physician-to-bed ratio.

**b. MET 3: Conduct Temporary Casualty Holding (MCT 4.5.4).** The STP provides pre-evacuation and pre-surgical holding for casualties awaiting FRSS intervention or evacuation to a higher echelon of care. This is a secondary function of the STP; the Holding section is the primary executor of MET 3.

(1) Casualties stabilized by DCR but awaiting FRSS availability or evacuation assets remain in STP beds under monitoring by the assigned bed team. The Emergency Nurse coordinates ongoing blood product administration and reassessment per reference (c).

(2) FMT bed teams maintain casualty accountability, document treatment, and prepare casualties for transfer. Documentation includes completion of the DD 3019 Resuscitation Record and Prolonged Field Care Casualty Card from AMAL 632.

(3) Patient monitoring equipment classified as Essential for MET 3 in enclosures (3) and (4) includes vital signs monitors, pulse oximeters, and capnography, enabling continued assessment during the holding period.

**c. MET 4: Conduct Casualty Evacuation (MCT 4.5.5).** The STP supports MET 4 by preparing casualties for evacuation and executing casualty turnover per HSS-SVCS-3401. The COC and Ambulance section are the primary executors of evacuation coordination and movement.

(1) The Emergency Physician or PA prepares the casualty evacuation request and determines evacuation precedence per reference (f).

(2) The assigned FMT bed team prepares the casualty for transport: secures lines and tubes, completes documentation, and conducts a casualty turnover briefing to the receiving evacuation team. Litter systems and patient support equipment classified as Helpful for MET 4 in enclosure (3) are employed during this phase.

**d. MET 5: Conduct Mass Casualty Operations (MCT 4.5.6).** Upon MASCAL declaration per reference (d), the STP transitions from routine operations to surge posture. MET 5 is the maximum demand state for STP personnel and equipment.

(1) The senior Emergency Physician assumes the role of Triage Officer, relocating to the point of entry to execute triage per HSS-SVCS-3701. The Physician Assistant and second Emergency Physician assume DCR responsibility across all four beds.

(2) FMT bed teams accelerate patient throughput by focusing on life-saving interventions only, deferring definitive wound care to holding or FRSS. Bed turnover time becomes the critical metric.

(3) The Emergency Nurse activates MTP and WBB procedures per reference (c) in coordination with the HQ Blood Bank Lead. Blood product consumption accelerates during MASCAL; all STP personnel classified as Essential for MET 5 must be proficient in the emergency whole blood collection procedures detailed in reference (c).

(4) Equipment and consumables classified as Essential for MET 5 in enclosures (3) and (4) mirror MET 2 classifications with additional emphasis on high-volume consumption items: IV fluids, blood transfusion sets, hemostatic dressings, and airway supplies.

**e. MET 7: Conduct Medical Regulating Services (MCT 4.5.8).** The STP supports MET 7 by maintaining patient status reporting to the COC and providing clinical input to the common operational picture (COP). The COC is the primary executor of MET 7.

(1) The STP OIC or designated Emergency Physician provides clinical status updates to the COC Watch Officer, enabling the Medical Regulator to coordinate patient movement and bed status reporting per reference (f).

(2) Documentation items classified as Helpful for MET 7 in enclosures (3) and (4) support this function.

## **6. Transition of Care: STP-to-FRSS Handoff**

a. All patient transfers from the STP to the FRSS will follow the I-PASS handoff protocol detailed in enclosure (2). I-PASS is an evidence-based structured communication framework shown to reduce medical errors during transitions of care per reference (g). The transferring Emergency Physician or PA delivers the I-PASS briefing to the receiving FRSS surgeon. The FRSS team synthesizes the handoff and verbally accepts or requests additional stabilization before physical patient transfer.

b. Physical patient transfer is a discrete event: the STP bed team transfers the patient to the FRSS team at a designated handoff point. STP bed teams do not follow patients into the FRSS operating environment unless specifically directed by the Platoon Commander during surge operations per reference (d).

c. Blood product status is a mandatory element of every I-PASS handoff. The transferring provider must state: total blood products administered, current MTP status (active/discontinued), and anticipated blood requirements for the surgical procedure, per reference (c).

## **7. AMAL Equipment and Consumable Tiering**

a. Enclosures (3) and (4) classify every line item in AMAL 631 (Shock Surgical/Triage Equipment, 226 items) and AMAL 632 (Shock Surgical/Triage Consumables, 266 items) as Essential, Helpful, or Expendable for each MET supported by HSS-STP-5001: METs 2, 3, 4, 5, and 7. Tier definitions are provided in enclosure (6).

b. During degraded logistics or contested resupply per the operational environment described in reference (f), the Platoon Commander will prioritize resupply requests and Class VIII push packages based on the Essential tier for the primary MET in execution. Items Essential for MET 2 and MET 5 represent the minimum viable DCR capability and will receive highest resupply priority.

c. Items classified as Expendable for all assessed METs may be left behind during displacement to reduce the STP footprint and enhance mobility per reference (b), which identifies the STP as the most mobile medical support platoon of the medical battalion.

**8. Administration and Logistics.** This SOP will be reviewed annually or upon significant changes to references (a) through (d). The STP OIC will maintain a current AMAL inventory cross-referenced against enclosures (3) and (4) to enable rapid assessment of MET execution capability based on on-hand supply status.

**9. Command and Signal.** The STP OIC (senior Emergency Physician) retains authority for all clinical and task organization decisions within the STP. In the absence of the OIC, authority passes to the second Emergency Physician, then to the Physician Assistant. The STP Platoon Sergeant (FMT senior enlisted) manages administrative and logistical functions.

**ENCLOSURE (1)****STP Table of Organization - Deployment Configuration**

The following table reflects the 1st Medical Battalion STP deployment T/O. Doctrinal STP organization per reference (b) includes a stabilization section and two collecting/evacuation sections with four M997 ambulances. The deployment configuration consolidates into a single operating section with 4 resuscitation beds served by 3-person FMT bed teams, with the ambulance section separated as an independent functional area. The IDC billet is aspirational and will be filled as manning allows.

<b>Position</b>	<b>Qty</b>	<b>Primary Role in MET Execution</b>
<b>Emergency Physician</b>	2	DCR lead across 4 resuscitation beds; triage authority; MET 2/5 primary provider
<b>Emergency Nurse</b>	1	DCR nursing oversight; blood product administration; MET 2/5 clinical support
<b>Physician Assistant</b>	1	Flexes between triage and DCR based on volume; procedures (IO, chest tubes)
<i>IDC (Aspirational)</i>	<i>(1)</i>	<i>Aspirational fill; would augment DCR/triage capacity if manned</i>
<b>Field Medical Technician</b>	12	Organized as 4 bed teams (3 FMTs per bed); execute bedside DCR under physician oversight; triage support, patient movement, documentation

**Bed Team Organization:**

Bed 1: FMT-1, FMT-2, FMT-3 | Bed 2: FMT-4, FMT-5, FMT-6  
 Bed 3: FMT-7, FMT-8, FMT-9 | Bed 4: FMT-10, FMT-11, FMT-12

Within each bed team, roles are: (A) Airway/Monitor technician, (B) Vascular Access/Blood technician, (C) Documentation/Runner. Roles rotate within the bed team per OIC direction.

**ENCLOSURE (2)****I-PASS Transition of Care Protocol for STP-to-FRSS Handoff**

All patient transfers from STP to FRSS will use the I-PASS structured handoff framework per reference (g). The transferring Emergency Physician or Physician Assistant delivers the briefing face-to-face to the receiving FRSS surgeon at the designated handoff point. Blood product status per reference (c) is a mandatory element. The FRSS team must verbally synthesize and accept before physical patient transfer occurs.

<b>Element</b>	<b>STP-to-FRSS Application</b>
<b>I - Illness Severity</b>	Stable / Unstable / Actively deteriorating. State current hemodynamic status, GCS, and whether patient is on vasopressors or MTP per reference (c).
<b>P - Patient Summary</b>	Mechanism of injury, injuries identified (including POCUS findings), interventions completed in STP (airways placed, blood products given, chest tubes, etc.), allergies if known.
<b>A - Action List</b>	Pending actions for FRSS: surgical indication, anticipated procedure, outstanding labs/imaging, blood products in progress or needed, antibiotics due.
<b>S - Situation Awareness</b>	Contingency planning: what to watch for (re-bleeding, tension pneumo, coagulopathy); what triggers return to STP if surgical candidate deteriorates; current MASCAL status per reference (b).
<b>S - Synthesis by Receiver</b>	FRSS team reads back key elements: surgical plan, blood product status, patient identity. FRSS accepts or requests additional stabilization before transfer.

**Mandatory Blood Product Reporting Elements (per reference (c)):**

1. Total PRBCs/Whole Blood/FFP/Cryo/Platelets administered
2. MTP status: Active / Discontinued / Not initiated
3. WBB status: Activated / Standing by / Not required
4. Anticipated surgical blood requirements
5. Most recent i-STAT results (if available)
6. TXA administration status per reference (c)

**ENCLOSURE (3)****AMAL 631 (Shock Surgical/Triage Equipment) Tier Classification by MET**

226 line items classified against METs 2, 3, 4, 5, and 7 per reference (a). See enclosure (6) for tier definitions.

**ENCLOSURE (6)**  
**Tier Classification Legend and Definitions**

Tier	Definition
<b>Essential</b>	Equipment/supply without which the MET cannot be accomplished. Loss renders the capability non-executable. Highest priority for resupply, maintenance, and protection.
<b>Helpful</b>	Equipment/supply that significantly enhances MET execution quality, speed, or capacity. MET can be accomplished in degraded mode without this item. Secondary priority for resupply.
<b>Expendable</b>	Equipment/supply not required for this specific MET. May support other METs or general operations. Lowest resupply priority for this MET.

**Application Notes:**

1. These tier classifications represent a baseline assessment against each MET. The OIC retains authority to adjust classifications based on specific operational conditions and mission requirements.
2. Items classified as Essential for MET 2 (Casualty Treatment) and MET 5 (Mass Casualty Operations) represent the minimum viable DCR capability. Loss of these items without replacement degrades or eliminates the STP core mission.
3. During MASCAL operations per reference (d), resupply priority shifts to MET 5 Essential items. High-consumption items (IV fluids, blood transfusion sets, hemostatic agents, airway supplies) will be expended at accelerated rates.
4. Blood product support equipment (warmers, infusors, transfusion sets, blood typing kits) classified as Essential for METs 2 and 5 must be maintained in operational condition at all times per reference (c). Failure of blood warming systems directly degrades DCR capability.
5. Point-of-care diagnostic equipment (POCUS, i-STAT) is classified as Helpful rather than Essential because DCR decisions can be made clinically without diagnostic confirmation. However, availability of diagnostics significantly improves clinical decision quality, particularly for FRSS surgical triage.
6. An Expendable classification does not mean the item has no value. It means the specific MET under assessment does not require that item for execution. Storage and transport containers, for example, are Expendable for clinical METs but essential for displacement and mobility.
